```
using keys found in /config/keys
After completing the web-based installer, restart the Nextcloud container to
apply default memory caching and transactional file locking configurations.
Alternatively, you can apply your own configurations by editing
/config/www/nextcloud/config/config.php following the documentation:
https://docs.nextcloud.com/server/latest/admin_manual/configuration_server/
caching_configuration.html
https://docs.nextcloud.com/server/latest/admin_manual/configuration_files/
files_locking_transactional.html
